

The national economy was right on consensus expectations (165,000 jobs), adding 164,000 jobs in July. Education and health services (66,000 jobs) was the leading employment sector in the recent release. Professional and business services continued its expansion, adding 38,000 positions. Over 63% of the nation's job gains came from the two largest-gaining sectors. Manufacturing employment surged for the second consecutive month, adding 16,000 workers. However, the PMI continued its downward trend, falling to 51.2 in July. Mining and logging and information services were the only sectors to lose jobs in the recent release. The US economy averaged employment growth of 223,000 jobs per month in 2018 and is currently averaging 165,000 jobs per month through July. The economy is in the mature stage of the business cycle but there still seems to be room to run. We expect employment growth to moderate in 2019, with gains around 170,000 jobs per month.

US Labor Market Snapshot (July 2019)											
Variable	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019 Avg.	Difference from 2007
Population (Civilian, Non-Inst.)	237,829	239,618	243,284	245,679	247,947	250,801	253,538	255,079	257,791	258,712	11.6%

Note: Population, employment, and "Not in Labor Force" data are in thousands.

The US labor market strengthened in the recent release. The unemployment rate remained at 3.7% in July. Total employment is now 9.4% above the trough from the last recession. In addition, the July underutilization rate of 7.0% is the lowest rate since September 2000. Finally, the labor force participation rate has increased for the second straight month, reaching 63.0% in July. This being said, we expect the gap between this year's labor force participation rate and the 2007 annual value to reach more than 300 bps as the labor market becomes less robust in the second half of the year.
